The American Academy of Pediatrics recommends exclusive breastfeeding for the first six months. Women everywhere are returning to work and successfully continuing to breastfeed. Advanced planning, family and workplace support, and a high quality breastpump help create success for working moms. The longer babies are breastfed, the greater the health benefits for both mom and baby. Breastfeeding is good for your employer too – it reduces employees’ absence from work for baby’s illnesses.

Breastfeeding is good for your employer too – it reduces employees’ absence from work for baby’s illnesses.

Choosing the Right Pump & Accessories

It is important to select the best breastpump and accessories for your work situation. Many working moms choose Freestyle®, Pump in Style® Advanced or a hospital-grade breastpump, such as Symphony®. These pumps offer superior performance, comfort and convenience. Medela pumps have either a vehicle lighter or battery pack for options. Call 1-800 TELL YOU for a local retail or rental location or visit www.medela.com.

Choosing a Childcare Provider for Your Baby

Choose a childcare provider you trust who is comfortable caring for your breastfed baby. You can also check with your state or county for a list of licensed childcare providers. By choosing a childcare provider that is close to your workplace, you can visit your baby and breastfeed during lunch.

Benefits of Breastfeeding

You and Your Milk Supply

Your milk supply is established in the first days after birth. Breastfeed your baby frequently to help produce lots of milk. Make use of the time after your baby is born to rest and regain your energy. Avoid giving bottles and/or pacifiers until breastfeeding is well-established.
First Week of Work

Going back to work can be overwhelming. Start slowly, if possible, by returning to work for only a half-day, or mid-week. It is normal to feel tired at first. On days off, nap with your baby, enjoy your time together, and breastfeed often. Protect your milk supply by pumping often while away and breastfeeding when you are with your baby. Avoid having your breasts become overly full, as engorgement sends a signal to your body to slow down milk production.

Pumping at Work

The milk you pump at work one day may or can be used the next day to feed your baby. After pumping, cool your milk in a refrigerator or cooler. Store your milk in Medela’s BPA-free breastmilk collection bottles or storage bags specifically designed for breastmilk, such as Medela Pump & Save™ bags. Freeze milk in 2-4 ounce containers and thaw when needed to use as back-up supply. Use a cooler carrier with frozen ice packs to transport your milk from work or to your daycare provider.

If your work involves overnight travel, milk can be shipped home packed in dry ice, or shipped on the airlines packed in cooler containers with dry ice packs. Check www.faa.gov for the most recent rules and regulations.

Medela offers breastpumps that are ideal for pumping at work. The Freestyle® and Pump In Style® Advanced include everything you need in convenient carrying bags and feature 2-Phase Expression® technology for more milk in less time.* In addition, Freestyle is uniquely small and lightweight and includes accessories for optional hands-free pumping.

More Tips for Pumping at Work

- Two-piece clothing that opens easily at the waist makes pumping easier.
- If your supply is low, breastfeeding or pumping more often is the simplest way to increase your supply.
